responsive on-demand nanotherapy based on amine-modified graphene oxide for synergistic dual drug delivery."

The study abstract reveals how a cell phone can emit signals to activate a low voltage current that interacts with Graphene Oxide (GO) molecules, causing efficient delivery of drug payloads:

*This study aims to determine low-voltage-controlled dual drug (aspirin and doxorubicin) release from GO surface. Here, we have demonstrated how to control the drug release rate remotely with a handy mobile phone, with zero passive release at idle time.*

Because of its extremely high surface area and complex structure composition, graphene oxide turns out to be the perfect molecule for delivery of biological or drug payloads inside the body. From the study:

*These advantages make GO an extremely potential nanocomposite material as a drug carrier in the field of biomedicine and biotechnology, while being combined with a polymer or inorganic matrix.*

- 5G relies primarily on the bandwidth of the millimeter wave, known to cause a painful burning sensation. It's also been linked to eye and heart problems, suppressed immune function, genetic damage and fertility problems.
- The Federal Communications Commission (FCC) admits no 5G safety studies have been conducted or funded by the agency or telecom industry, and that none are planned.
- The FCC has been captured by the telecom industry, which in turn has perfected the disinformation strategies employed by the tobacco industry before it.
- Persistent exposures to microwave frequencies like those from cellphones can cause mitochondrial dysfunction and nuclear DNA damage from free radicals produced from peroxynitrite.
- Excessive exposures to cellphones and Wi-Fi networks have been linked to chronic diseases such as cardiac arrhythmias, anxiety, depression, autism, Alzheimer's and infertility.

[The Cellular Phone Task Force website](#) lists numerous warnings from governments and agencies around the world who have sounded the alarm on cell phone radiation and its harmful effects on human biology.

## **Radiofrequency microwave radiation causes voltage changes inside the body's cells, altering calcium channels**

Additionally, compelling research led by Martin Pall, Ph.D., Professor Emeritus of biochemistry and basic medical sciences at Washington State University, reveals that microwave radiation from mobile devices and wireless routers **causes voltage changes inside the body's cells**, activating what are called "Voltage-Gated Calcium Channels" (VGCCs). which are located in the outer

*According to Pall, VGCCs are 7.2 million times more sensitive to microwave radiation than the charged particles inside and outside our cells, which means the safety standards for this exposure are off by a factor of 7.2 million.*

***Low-frequency microwave radiation opens your VGCCs, thereby allowing an abnormal influx of calcium ions into the cell, which in turn activates nitric oxide and superoxide which react nearly instantaneously to form peroxynitrite that then causes carbonate free radicals, which are one of the most damaging reactive nitrogen species known and thought to be a root cause for many of today's chronic diseases.***

This means that cell phone radiation (and 5G cell tower radiation) does, indeed, induce voltage changes in the human body, and that these voltage changes have very real biochemical effects, some of which may be dangerous to human health (such as the formation of peroxynitrite molecules).

Fighting these potent free radicals can be achieved in part with nutritional approaches, such as through the use of superoxide dismutase enzyme (SOD), which is the foundational nutrient in the Health Ranger Store's [5G Defense powders](#). Notably, SOD (which is usually derived from melon fruit) does not block cell tower radiation itself, but it helps the body respond to cellular stresses such as the formation of peroxynitrite molecules.

In related news [reported by Reuters](#), French regulators have issued a warning to Apple to stop selling iPhone 12 phones due to the presence of excessive radiation produced by the devices. Apple's smartphone exceeds the allowable legal limit of radiation. This phone has been sold since 2020.

## **5G signals may be used to cause Graphene Oxide to release payloads inside the human body**

Connecting the dots on all this: 5G signals can be used to generate low voltage inside the human

*In conclusion, we have shown here that NGO can be used as a dual drug delivery agent, and **the release of drugs can be controlled by an external voltage**. To exploit the synergistic effect of ASP and DOX, we modified NGO and attached two drugs to it. Our labmade remote-controlled device efficiently released the anticancer drug. The releasing process can **easily be switched on and off with a mobile phone** by changing the bias voltage.*

## **Graphene Oxide can carry biological or chemical weapons as payloads**

In the scientific paper quoted above, the payload was aspirin plus a common cancer drug. However, payloads can be almost anything of sufficiently small size, including both hydrophilic and hydrophobic molecules. From the study, "We have also demonstrated how hydrophilic (ASP) and hydrophobic drugs (DOX) can be delivered by using a single delivery platform."

This means that potent chemical weapons – theoretically including nerve agents that are fatal at nanograms of exposure – could be loaded into graphene oxide molecules which are surreptitiously

were virus-like nanoparticles, payload delivery could cause a large portion of the population to suddenly appear to be "infected" with a pandemic virus that is spreading at unimaginable speed.

This technology, in other words, could be used as a "kill switch" to terminate whatever portion of the population was previously inoculated with payload-carrying GO.

## **"Black ink" printed on pharmaceutical capsules shown to be magnetic and may contain graphene oxide**

Some additional information came to my attention during the writing of this article. The black ink printed on the side of pharmaceutical capsules actually consists of **mysterious black specks which are magnetic**. A contact sent me a video, represented in the following screen shot, showing pharmaceutical capsules soaked in water for several hours, after which the black "ink" from the capsules turned into black specs that displayed startling magnetic properties. In this still photo, you can see the black specs gather at the common magnet held against the glass:

*The magnetic field isn't created by the usual spin of electrons within the individual graphene layers, but instead arises from the collective swirling of electrons in all of the three-layers of the stacked graphene structure, researchers reported Oct. 12 in the journal Nature Physics.*

Is graphene being used in the "ink" that's printed on the side of prescription medications? We don't know for certain, but the fact that this ink is clearly magnetic is alarming.

## **Graphene oxide can also transmit gigahertz signals to nearby receivers**

Additionally, under certain exotic applications of graphic oxide (GO) materials, **those whose bodies are activated by cell tower broadcast could themselves function as electromagnetic "repeaters" due to the ability of GO to function as transmitters.**

This capability is well documented in a study entitled, "Radio-frequency characteristics of graphene oxide," published in *Applied Physics Letters* in 2010. (<https://doi.org/10.1063/1.3506468>) That study explains: (emphasis added)

*We confirm graphene oxide, a two-dimensional carbon structure at the nanoscale level can be a strong candidate for high-efficient interconnector*

*in radio-frequency range. In this paper, we investigate high frequency characteristics of graphene oxide in range of 0.5–40 GHz. Radiofrequency transmission properties were extracted as S-parameters to determine the intrinsic ac transmission of graphene sheets, such as the impedance variation dependence on frequency. The impedance and resistance of graphene sheets drastically decrease as frequency increases. This result confirms **graphene oxide has high potential for transmitting signals at gigahertz ranges.***

Graphene oxide materials, in other words, can both carry payloads which are delivered via remote cell phone signaling, as well as transmit signals to other nearby receivers.

FIG. 2.

From the conclusion of that published paper:

*...[W]e expect that GO could be used for transmission lines in next-stage electronics and could be very strong candidate for nanocarbon electronics.*

6. The 5G tower system can therefore function as a chemical weapons payload release infrastructure system to achieve a "mass kill" of populations which were previously inoculated with payload-carrying GO.
7. Covid vaccines -- which are now widely known to have had nothing to do with halting any pandemic (since even the White House and CDC both admit they do not halt transmission or infections) -- could have theoretically been used to inoculate people with graphene oxide payloads which have not yet been activated.

Thus, it is *plausible* -- but not proven -- that vaccines + 5G cell towers could be exploited as a depopulation weapon system to achieve near-simultaneous mass extermination of a large percentage of the human population, simply by activating GO payload release with a specific broadcast energy intensity and frequency.

Given that the western governments of the world are clearly attempting to exterminate their own populations right now, this conclusion should be concerning to all those who wish to survive the [global depopulation agenda](#).

## About Mike Adams

Founding Editor

[See real-time updates from the Health Ranger on Brighteon.social](#)

Mike Adams (aka the "[Health Ranger](#)") is the founding editor of NaturalNews.com, a best selling author (#1 best selling science book on Amazon.com called "[Food Forensics](#)"), an environmental scientist, a patent holder for a cesium radioactive isotope elimination invention, a multiple award winner for outstanding journalism, a science news publisher and influential commentator on topics ranging from science and medicine to culture and politics.

Mike Adams also serves as the lab science director of an internationally accredited (ISO 17025) analytical laboratory known as [CWC Labs](#). There, he was awarded a [Certificate of Excellence](#) for achieving extremely high accuracy in the analysis of toxic elements in unknown water samples using ICP-MS instrumentation.

In his laboratory research, Adams has made numerous food safety breakthroughs such as revealing rice protein products imported from Asia to be [contaminated with toxic heavy metals like lead, cadmium and tungsten](#). Adams was the first food science researcher to document [high levels of tungsten in superfoods](#). He also discovered [over 11 ppm lead in imported mangosteen powder](#), and led an [industry-wide voluntary agreement](#) to limit heavy metals in rice protein products.

Adams has also helped [defend the rights of home gardeners](#) and protect the [medical freedom rights of parents](#). Adams is widely recognized to have made a remarkable global impact on issues like GMOs, vaccines, nutrition therapies, human consciousness.

So the thing is Your cell phones do not have a "5g" antennae inside?

Further, if it did it would no way you could use it do to the radiation it would give you.
